DrillAir: Putting you in control

We have developed, and will continue developing, a full range of compressors known as the DrillAir range. This range of compressors is specifically developed to cover a multitude of drilling applications. The DrillAir range is built scientifically around the principals of pressure and flow. The focus of the design is the relationship between these two variables and for the compressor to find the combination which is right for the application – to improve the efficiency aspects of time spent and fuel consumed. With the DrillAir range you achieve the maximum air flow at any pressure setting.

There is no such thing as one size fits all when it comes to efficient drilling. Depending on the depth of hole and the size of the hammer the right product makes all the difference. The DrillAir range gives you the opportunity to choose a product which is right for your core business, while giving you the flexibility to adapt to changes in well depth and hammer size for any custom applications.

Let us find the DrillAir machine that is right for you!

XATS 1200

34.7 - 31.2 m³/min
4.5 - 10 bar

XAVS 1000

28.9 - 25.5 m³/min
4.5 - 14 bar

V900

25.4 - 22.8 m³/min
15 - 25 bar

X1300

39 - 35 m³/min
13 - 30 bar

Atlas Copco

Industries and applications

Drilling

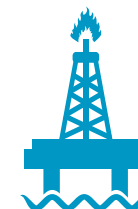

Geothermal drilling and construction.

Mining

Blast hole drilling and exploration.

Oil & Gas

Pipeline, well services and aerated drilling.

Technology that makes a difference

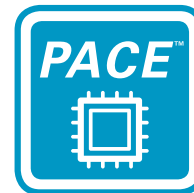

The combination of DrillAirXpert, the Atlas Copco screw element and a Cummins engine provides high efficiency for a wide range of pressure and flow settings.

DrillAirXpert offers up to 30% increased drilling speed.

Dynamic Flow Boost[®] gives up to 4 m³/min additional flow when flushing and during drill stem refill. It means faster flushing, faster stem refill and a shorter time to finish drilling.

Dynamic flow boost can achieve 10% more flow at lower working pressure for larger diameter drilling.

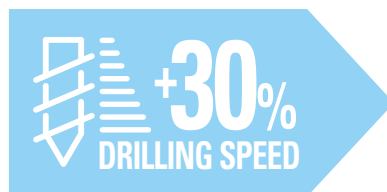

Thanks to the intuitive PACE system (Pressure Adjusted thru Cognitive Electronics) you receive the most options from a single compressor.

This pioneering technology enables multiple pressure and flow settings, ensuring you match air flow and pressure to your application needs.

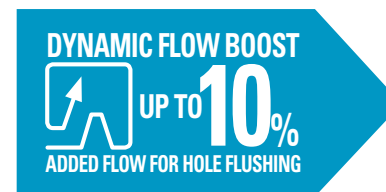

Atlas Copco XPR extends the working pressure range.

It is based on patented technology and lets you set the working pressure as low as 15 bar.

Data may change depending on model.

Built to be your long-term partner

The new oil separator system design reduces maintenance time by more than one hour.

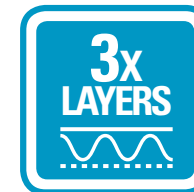

The centralized drain system makes the maintenance easier and less time consuming.

The 500 hour service interval reduces the maintenance frequency.

A strategic engine choice to meet your needs. Guaranteed support and longevity.

We chose the Cummins Stage III engine for this range.

The three layer protection coating of all bodywork minimizes repainting costs.

The top layer, a 100µm powder coat creates a barrier against mechanical damage. The 100µm layer of primer protects from corrosion infiltrating under the coating.

In the event of coating damage, the steel is protected by a Zincor layer.

Built better...

Advanced controller with PACE function and IP65 protection.

Sound attenuated muffler inside.

Cummins G3/Stage IIIA performance engine.

Additional fuel filter for improved engine protection.

FuelXpert system as standard, for efficiency at partial load.

...I **V900**
XATS 1200
XAVS 1000

Integrated battery hub with anti-dust protection.

Integrated, optimized air filtration system for easy service and performance.

Integrated fail-safe outlet valves.

Ergonomic integrated ladder inside.

Dedicated service door for oil level observation and oil filling for compressor.

Performs better!

Visual Xc controller with PowerXpert, Dynamic Flow Boost and automatic start/stop.

Centralized drain for easy service.

Toggle switch to allow easy pressure switching.

DrillAirXpert to guarantee the most efficient drilling speed.

X1300

Integrated ladder for easy access to the roof.

Highly efficient in-house designed two-stage screw element.

Safe lifting slots.

Easy service vessel. Needs less than one hour to change the oil separator element.

Top guided exhaust with insulation. Muffler in the dedicated and isolated chamber.

Committed to sustainable productivity

Atlas Copco's Portable Energy division has a forward-thinking philosophy. For us, creating customer value is all about anticipating and exceeding your future needs – while never compromising our environmental principles. Looking ahead and staying ahead is the only way we can ensure we are your long term partner.
